

Schedule Smart

Speaker Biography

Tal Levanon is the creator of the Hidden Critical Paths (HCP) method (patent), owner and CTO of Tal Levanon - HCP LTD.

The Hidden Critical Paths (HCP) method (patented) has been implemented in ~300 large-scale infrastructure and construction projects, including highways, interchanges, bridges, tunnels, railroad tracks, plants, sports stadiums and residential towers, office towers, hotels, security and technological projects.

The method has been developed by Tal Levanon since the early 2000s. This mathematics-based method reveals critical information that is hidden in the project schedules (Gantt). The information is valuable for improving the planning, estimate, schedule management and performance monitoring of every project.

In 2020, the HCP-Go, a project SaaS, was developed – allowing anyone, including projects managers, consultants who built schedules, attorneys who love the practice, and entrepreneurs who received a schedule from the project managers and want to know what it means, to use the SaaS through Project for their schedule and receive a detailed schedule report within a minute, including troubleshooting and project status overview.

Tal holds a B.Sc and M.Sc in IE, both with honors from Tel-Aviv University, Israel and PMI-SP.
