Construction CPM Conference

January 21 - 25, 2012

Swan Resort – *Walt Disney World*® - Florida

Three Days of Learning, Networking and Fun

Dear Construction CPM Conference Attendee;

Mandara Spa would like to welcome you to the Walt Disney World Swan and Dolphin Hotel, and wish you a wonderful and relaxing stay!

Mandara Spa is offering some wonderful specials exclusively for your group. You will save \$25.00 on any individual service valued at \$100.00 or more! In addition, we will also be extending a 20% discount on all retail purchases for your group while you are with us. These discounts, of course, are not to be used in conjunction with any other offers or discounts.

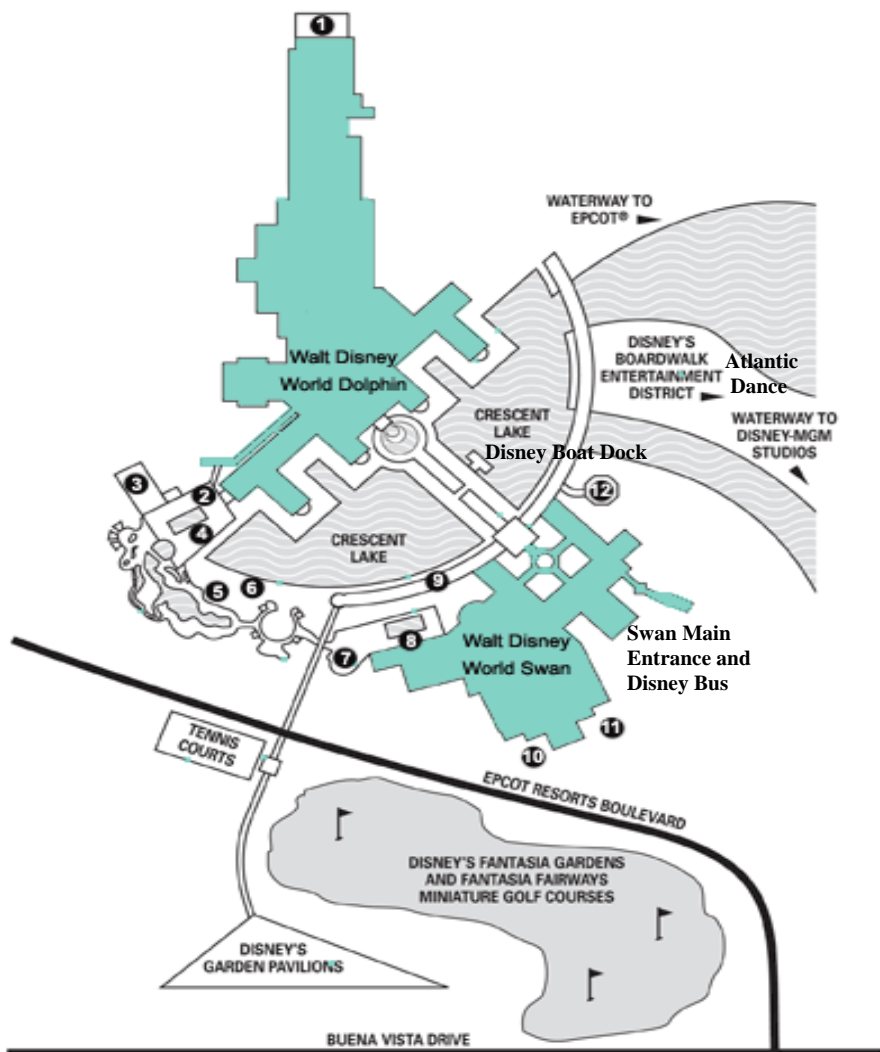

To take advantage of this special offer, and experience one of our luxurious treatments, please mention this letter and your group when making your reservation. We also ask that you please present this letter to the spa concierge when you check in for your appointment.

Mandara Spa is located on the lobby level at the Dolphin by the East Elevators. We are open daily from 8am to 9pm. For appointments please call extension 4772 from any house phone, or (407) 934-4772 from an outside line to secure your reservations.

THE NEW DIMENSION IN CONSTRUCTION PROJECT MANAGEMENT SOFTWARE

Every construction project depends on many people for its success. ENR's Top Contractors choose Synchro Professional to plan and schedule flawless project delivery. Synchro's thousands of users working around the world include:

- 28 of the ENR Top 50 USA Contractors
- 50 of the ENR Top 225 Global Contractors

Synchro's award-winning 4D planning and CPM scheduling software takes your team to true synchronisation; moving far beyond traditional project planning and visualization techniques.

Imagine a world where the CPM schedule is the 4D BIM and the 4D BIM is the CPM schedule. Whether local or global, delivering buildings, infrastructure, high-rise, industrial, power or mining choose Synchro to compete and deliver among the world's best.

It is time your project delivery team is fully Synchronised with Synchro Professional.

CONTRACT MANAGEMENT INTERFACE

CMI was developed by MLM Project Services, an affiliated company of DRMcNatty & Associates, to efficiently receive RFIs, Submittals, Change Proposals and Daily Reports along with attachments, directly into Primavera Contract Management.

Features

- Resolves CM issue related to read/write access for attachments.
- Simple to use, users can be trained via the web in an hour.
- Inexpensive to deploy, requires a CM Web Service License.
- Eliminates the need for your staff to manually enter documents.
- Allows Owners and Contractors the security of separate interfaces.
- Contractors run their own reports to check status of submitted items.
- CMI can be configured to customers preferences and customized.
- Automatic email notification and receipt for all documents.
- Contractors still prepare RFI's, Submittals, Proposals in their own system – then submit PDF's and attachments through CMI.

REDUCE ADMINISTRATIVE TIME & IMPROVE DOCUMENTATION!

of Full Monte

All project managers know that the future is uncertain and that our deterministic plans are bound to be wrong. **Full Monte™** helps you analyze the impact of this uncertainty to create more realistic project plans.

Using Monte Carlo simulation, **Full Monte™** can consider thousands of possible outcomes for your project in seconds, summarizing them as probability distributions of project finish date and cost.

Full Monte™ works on Microsoft® Project schedules from within Microsoft® Project 2007 or 2010.

SUN14 – Sunday 9:45 to 11:00 Osprey 2

Introduction to Synchro Professional

This is the Construction CPM Conference not a CAD user conference so let us see 4D planning and scheduling that improves the planning and scheduling process and ultimately job site conditions.

Find out the details behind 4D CPM planning and scheduling; how Synchro's technology partnerships with Oracle Primavera, Bentley Systems and others are different and see for yourself why 4D works. Love it, or think you know all about BIM and Virtual Design and Construction software; but unless you're a seasoned Synchro user you really need to do yourself a favor and see this presentation for yourself. As a planner and scheduler make up your own mind. Many construction contracts are now mandating 4D Scheduling not just static design coordination linked to the project schedule but 4D Scheduling, the real thing. We have all seen the movies, the photo realistic 3D renderings, and the post processing results for visualizing the idea of your construction project but have you ever created the CPM from the model, in seconds? Simulated site logistics? Run a job meeting to analyze various options, solved real job site conflicts using side-by-side view points and then synchronised the results back to the master CPM schedule?

The good news is that while 4D can be as simple and limited as seeing your project schedule in full motion video produced by the BIM specialist for marketing purposes, 4D is so much more with Synchro. This presentation will open your eyes to real planning and scheduling process improvements for construction delivery.

Presented by Kirk Olson, Executive VP Synchro Ltd

SUN15 – Sunday 9:45 to 11:00 Mockingbird 1

Introduction to Phoenix Project Manager

Phoenix Project Manager 3 is a project-focused CPM scheduling tool for the construction, energy and architecture/engineering markets.

In this session, Jay Poulsen, President of Phoenix Project Management, will discuss the use of Phoenix Project Manager 3 to create and maintain project schedules, and how to migrate your current scheduling efforts from Primavera P3, Suretrak, or P6 to Phoenix. Mr. Poulsen will also discuss the future development direction of Phoenix Project Manager, and what users can expect from version 4 in 2012.

Abstracts

SUN16 – Sunday 9:45 to 11:00 Toucan 1

Industry Trends Noted in

CPM in Construction Management, 7th Edition

This classic, originally written by James J. O'Brien in 1964, continues to be used as a primary teaching textbook, a ready reference, and as an industry bible cited in numerous federal, state, municipal and private contract specifications. Professor Plotnick will discuss trends in CPM as used in Construction, as noted in the evolution of the text from the initial to the current seventh edition.

Q&A will also cover suggestions by Attendees on materials to add (or retire) for the upcoming 8th Edition (2015)

SUN17 – Sunday 9:45 to 11:00 Toucan 2

Scheduling, Fast and Slow

When a schedule is clear and salient features are disclosed, decision making and what-if scenarios can better be accomplished as the intuitive and deliberate thinking systems harmonize. Creativity and problem solving is optimized when thinking intuitively in cognitive-ease. This presentation examines the concepts of intuitive and deliberate thinking that naturally flow when schedulers engage in schedule analysis and how slight differences in CPM and GPM algorithms make a striking difference in schedule analysis cognition (intuitive thinking and deliberative thinking in mental effort are extensively covered in the text *Thinking, Fast and Slow* by Daniel Kahneman). Presented by Gui Ponce de Leon, PE, PMP, LEED AP; CEO/Managing Principal of PMA Consultants, Inc.

Oracle's Primavera Risk Analysis

This session will lead attendees from download of Primavera Risk Analysis (previously named Pertmaster) software from Oracle's website to delivery of the first update report to management.

Oracle's Primavera Risk Analysis is a full lifecycle risk analytics solution integrating cost and schedule risk management. Primavera Risk Analysis provides a comprehensive means of determining confidence levels for project success together with quick and easy techniques for determining contingency and risk response plans. You'll have an objective view of required contingency to account for cost and schedule uncertainty as well as analyzing the cost effectiveness of risk response plans.

SUN22 – Sunday 11:00 to 12:15 Swan 5

Microsoft Project 2010 Advanced Issues for Construction Users

Love it or hate it, Microsoft Project (MSP) CPM scheduling software is here to stay. Many construction contracts are now mandating its use. Most people using MSP on construction projects find that MSP is fine for planning the work but very difficult to use when maintaining the status and accurately forecasting project completion. The good news is that you can 'make' MSP properly reflect complicated status including out-of-sequence progress resembling Retained Logic. This advanced presentation will explain how to best use MSP in place of P6 or other more status-oriented scheduling software. Presented by Ron Winter, PSP

Practical Use of Oracle's Primavera P6 EPPM Download to 1st Report

This session will lead attendees from download of Primavera P6 software from Oracle's website to delivery of the first report to management of the Contractor and the Owner. This session is taught by two veteran users of P6™, Hannah Schumacher, Director of Scheduling Services for FDI Planning Consultants (www.fdiplan.com) and Charlie Jackson, Vice President of Primavera Services for Hill International (www.hillintl.com).

Many Contract Documents are now requiring the use of the latest version of Primavera software (P6™) due to its enterprise capabilities and its use of latest technologies including the capabilities to interact other software applications; therefore it is important for the Scheduler to understand how to use this software most efficiently in their battle to complete their projects in a timely manner.

Primavera's latest release of P6™ contains many features that can assist in developing schedules quickly and efficiently. However, a new or in-experienced user would be overwhelmed in the struggle to prepare the schedule using P6™ and these advanced features without proper training or "Basic Training". This session will focus on the presenters' experiences and their lessons learned regarding the effective use of P6™ in the schedule development process as they apply to the Planning and Scheduling development processes. The Scheduler should be able to apply the implementation and execution "Lessons Learned" outlined in this presentation to develop schedules quickly and efficiently using P6™.

SUN24 – Sunday 11:00 to 12:15 Osprey 2

Mike Stone on

Running a Successful Consulting Practice in Challenging Times

Mike Stone has served a diverse client base in both the private and public sectors on both domestic and international projects for many years and has made money even during the difficult periods. Mike will present the strategies he has used to develop and maintain a core group of clients that produce a dependable income stream. In this session Mike will discuss the types of services clients are looking for (and willing to pay for) and how to price for those services. Mike will also lead a frank discussion on how to find, train, and retain employees as well as how to determine when a great employee might not be a great consultant. www.cpmguru.com

Should Schedulers be Certified?

A introspection and comparison of certification programs. The emergence of a range of certifications for schedulers from CIOB and Planning Planet that provide a career path for practical use complement the elitist level certifications from AACE and PMI. With certification the possibility of developing a project controls profession starts to emerge. Presented by Pat Weaver of Mosaic Projects Services Pty Ltd.

SUN26 – Sunday 11:00 to 12:15 Toucan 1

Introduction to Asta Powerproject

Led by Andrew Willard, Asta's International Business Director, this session will show why over 45,000 users worldwide have made Asta Development's suite of project and portfolio management software a leader in the industry. Case studies will be presented to show these systems in action throughout the world. Coast Software is a US Representative for Asta Development offering regional support and training. Download a trial version of Asta's powerful yet easy-to-use applications at www.astadev.com.

SUN27 – Sunday 11:00 to 12:15 Toucan 2

CPM to GPM – Easing the Transition

Planning and scheduling as we know it today has been around since the early 1900's. Henry Gantt introduced the first bar chart in the 1910's, and in the late 1950's, Kelley and Walker developed the Critical Path Method (CPM). In 2008, a new scheduling algorithm known as the Graphical Path Method® (GPM) was introduced by Dr. Gui Ponce de Leon. CPM and GPM share some important things in common, but there are also some fundamental differences between the two scheduling methods. This paper presents a number of GPM concepts previously nonexistent in CPM. Once understood, these concepts can yield significant advantages and efficiencies to project management professionals and non-professionals alike. Understanding these core differences forms the basis for getting started with GPM and quickly improving your planning and scheduling outcomes.

Welcome Construction Professionals to the 2012 Construction CPM Conference

Please join Michael R. Nosbisch, CCC, PSP,
PT&C's *Managing Principal*, Western Region
and President of AACE International for his seminar,
"Scheduling Best Practices: Beyond the 14 Point Assessment."
Monday, January 23, 2:00 - 3:15 PM

Introduction to Acumen Fuse Software

Acumen Fuse® is a project metric analysis and visualization tool assessing schedule, cost, risk and project performance. Using advanced analytics and libraries of metrics, Fuse® provides a powerful means of pinpointing problematic areas and activities within a project and providing solutions for resolution. Advanced slice and dice analysis is achieved through a unique visualization approach using Acumen Fuse ribbons which can be generated by activity fields and custom attributes. This session will explore use of Acumen Fuse on a variety of CPM software file formats including Oracle Primavera P6 and Risk Analysis (Pertmaster,) Deltek Open Plan, Microsoft Project 2010, and others.

Fuse can be used for improving the quality of plans, assessing bids and sub-contractor schedules as well as powerful forensics during construction claims and disputes. Demo software may be downloaded at <http://www.projectacumen.com/products/fuse/trial>

SUN32 – Sunday 2:00 to 3:15 Swan 5

Critical Path 2.0

Critical Path, version 1.0, was invented in the late 1950's. It is a beautiful product of the human brain; it focuses project managers on activities that impact the project duration. However, some people say there are often gaps in their Critical Path and that they hardly ever see a complete Critical Path in their schedule. Others say that the Critical Path does not work after you have leveled the workloads; as soon as you start delaying tasks to address over-allocations, the Critical Path becomes fragmented and incomplete. These are real issues that an international working group initiated by Eric Uyttewaal has addressed. Eric will share the findings of this working group in this presentation and present to you what they would like to present as the second version of the Critical Path theory: Critical Path 2.0. The document produced by the working group is meant to become a standard for scheduling software that software vendors can aspire to. After 60 years, it is time for Critical Path 2.0! Come and see for yourself if this is indeed the direction that you want scheduling software to take.

Linear scheduling integration in a CPM network

For linear projects such as road, transmission line, rail, pipeline or tunnel projects, linear planning is the method of choice as it reflects both schedule and location based constraints such as environmental, permitting, crossings, rivers and elevation. TILOS™ incorporates all distance and schedule data into to a single time location (march chart) or a Gantt chart, allowing the project team to readily understand the challenges of the project, optimize the plan and manage the execution of the job.

TILOS™ presents a new approach of how the CPM can be enhanced to meet demands of linear schedules. Special distance based constraints for activity relationships can be defined in order to prevent crew overlaps. The results of these constraints are converted to two time-based lags on which the CPM network is calculated, including floats and critical path information. Data in TILOS™ can easily be exchanged with other project management systems such as Primavera™ or Microsoft Project™.

This session will demonstrate a complete project lifecycle using TILOS™ to: rapidly create a schedule based on templates and site data; explore the use of the tool for execution and project control; and illustrate data exchange with Primavera™

Demo software may be downloaded at

SUN37 – Sunday 2:00 to 3:15 Toucan 2

Schedule Integration on a Mega-Project

There are many options and variables for schedule control on construction projects. Most of the options start with the critical path method (CPM), and examples of the variables may include, amongst others: level of detail, frequency of updates, amount of integration, software of choice, and approach to resources. Decisions on these variables will vary from project to project and are influenced by many factors. The decisions and method of implementation can have a large impact on the success of the schedule control process and the project in general.

Joe Marshall of Marathon Petroleum Company and John Zann of PMA Consultants will discuss how a multi-billion dollar project successfully integrated the owner's master schedule with various subcontractor schedules and an owner controlled system turnover schedule. The following examines the possible approaches to schedule integration, the integration approach chosen by the project and the challenges that were overcome.

SUN41 – Sunday 3:35 to 4:50 Swan 6

U.S. Army Corps of Engineers Guide Specification on CPM

Jeff Huneycutt will discuss the expectations of the COE relating to preparation and utilization of a CPM.

Overview of P6 Release 8 Risk Module

One of the finer enhancements in Primavera P6 Release 8 is the improved capabilities of the Risk Module. While the Risk module has been available in earlier releases of P6, the functionality necessary for beneficial risk tracking on projects was limited and infrequently used by organizations. With Primavera P6 release 8, the Risk Module has been greatly enhanced to provide a robust risk register for projects. Enhanced capabilities for documenting Risk Response Plans, Risk Scoring, and text fields to document cause and effect are now available in the Risk Module in Primavera P6.

This presentation will provide an overview of the core functionality contained in the P6 Risk Module as well as provide information related to administrative elements to effectively use the Risk Module in P6 release 8.

Presented by Brian Criss of DRMcNatty & Associates, an Oracle Gold Partner specialized in Primavera project management tools providing Oracle and other software products, Certified Training and Implementation consulting, project support services and full system hosting services on a global basis.

DRMcNatty & Associates, Inc. is a CA Public Utilities Commission (CPUC) Certified Woman Owned Business.

ADM v PDM - Micro Planner is Versatile in Both

The original ADM format of CPM is still preferred in many instances, including litigation. Join Micro Planner founder Raf Dua in discussing comparing precedence diagrams (PDM) with arrow diagrams (ADM), problems of Lag Drag in Precedence, and how Micro Planner can bridge this all-but-lost art.

SUN45 – Sunday 3:35 to 4:50 Mockingbird 1

The CIOB Initiative - An International Strategy for Improved Time Management on Complex Projects

The Chartered Institute of Building (CIOB) is an international body mandated to promote excellence in construction management which was granted the Royal Charter in 1980. In 2008, the CIOB embarked upon a 5 year strategy to provide standards, education, training and accreditation in time management. This paper will introduce the CIOB's strategy for the improvement of time management on complex projects.

Phase 1 was carried out between December 2007 and January 2008. This was the CIOB's research into the industry's knowledge and experience of different methods of project control and time management. Phase 2 was the publication of the "Guide to Good Practice in the Management of Time in Complex Projects" in December 2010, which identifies the standards to be achieved to minimise the risk of delay to completion of construction projects. Phase 3, the development of accreditation is in preparation with the first examination structure, a Certificate in Time Management, intended to be available in July 2012. Phase 4, the production of a new standard form of contract, fit for use in the 21st century and of international application, is in its final draft stage and is due to be published in February 2012.

Presented by Keith Pickavance, Past President CIOB.

Power-Using Schedule Analyzer Software

Come find out the secrets of the hidden power-user features of Schedule Analyzer from customizable intelligent dictionaries to report editing tools that make documenting schedule deficiencies a breeze. Integrate P6 directly into your review process for the ultimate in 'drill down' functionality. Investigate calendar changes from years ago. Appreciate some of the unusual Schedule Analyzer reports that will open new vistas to building a better schedule. This session is presented by the software developer, Ron Winter, PSP.

SUN47 – Sunday 3:35 to 4:50 Toucan 2

Multi-Objective Optimization Model for Scheduling of Construction Projects

This presentation discusses a mathematical model for construction scheduling considering project scheduling characteristics generally ignored in prior research: precedence relationships, multiple crew-strategies, extreme weather impact, and time-cost trade-off. Previous scheduling formulations have not traditionally addressed the impact of extreme weather conditions on construction time and cost. The model minimizes two vital objectives of construction projects, namely, the duration and the total cost. This works best in areas with extreme weather, where construction productivity highly fluctuates during the year. In order to optimize these two important objectives, the model optimizes the resource utilization of the project activities as well as the project start date. This presentation will discuss the development of the model formulation to identify the decision variables and optimization objectives for this important construction scheduling problem; and the implementation of the model using three modules (i.e., scheduling, total cost computation, and multi-objective genetic algorithm).

Presented by Ahmed Senouci, Member ASCE and Saleh Mubarak, Member PMI, Dept. of Civil & Architectural Engineering, Qatar University.

MON00 – Monday 8:00 to 9:15 Swan 5 & 6

Keynote Session with Dr. Patricia D. Galloway, P.E.

Dr. Patricia D. Galloway, P.E. - CEO of Pegasus Global Holdings, Inc. - will discuss the operation of a CPM consulting firm (as well as "in-house" scheduling departments) with an emphasis on assisting the end user complete the project in a timely (and profitable) fashion.

Dr. Patricia Galloway is CEO of Pegasus Global Holdings, an international management consulting company providing strategic advice to executive management and boards in the power, oil and gas and infrastructure industries. She serves on the Discovery Science Channel's Advisory Board and the National Science Board, appointed by President Bush in 2006 for a six-year term. Dr. Galloway also serves as an arbitrator for the American Arbitration Association (AAA) and is a member of their construction, commercial, large case and international panels as well as a member of the AAA Board of Directors. She has authored over 150 papers and articles, including the author of the book entitled *The 21st Century Engineer* by ASCE Press. Dr. Galloway is a Past President of the American Society of Civil Engineers, and is a member of the National Academy of Construction, the Pan American Academy of Engineering, and the National Association of Corporate Directors

MON11 – Monday 9:45 to 11:00 Swan 6

Tips for Forensic Experts

Daniel Te Young of Vezina, Lawrence & Piscitelli, P.A., will provide tips for attendees on being a forensic expert in the field of construction delays and disruptions. This session also kicks off our two day "Litigation Track" which has been submitted to the Florida Bar for 15 hours of Attorney Continuing Education.

MON12 – Monday 9:45 to 11:00 Swan 5

Humphreys on EVM

This lesson focuses on various earned value measurement techniques, the challenge of planning and recording status for material, equipment and purchased services and will introduce the basics of both numerical and graphical analysis. It focuses on techniques for validating performance measurement data as presented in Contract Performance Reports. It reviews the various earned value data analysis techniques and includes methods of creating and graphically analyzing performance trends. The lesson focuses on EV based methods of forecasting and validating Estimates at Completion (EACs) and considers the impact of baseline changes on EAC computations.

Optimizing P6 8.1 with Critigen's Primavera EPPM Cloud Subscription Solution

For 25 years Oracle Primavera has been recognized as the leading choice for mission critical Enterprise Project Portfolio Management (EPPM) solutions. Until recently, companies had to invest significant upfront resources in order to build and maintain a sufficient IT infrastructure to support their Primavera solutions. With the advent of Cloud Computing and Software as a Service (SaaS) offerings, companies can now simply plug-in to pre-configured solutions with an internet connection. Critigen's new EPPM Cloud solution provides this cloud functionality so that Primavera tools can be used within a web-based monthly subscription service - www.EPPMCloud.com. John Wolf, Product Manager EPPM Cloud will discuss how Critigen and Oracle have partnered to make the Primavera accessible and economical in an enterprise cloud environment. You will learn how companies can leverage the world class functionality in Critigen's EPPM Cloud more quickly and at a fraction of the traditional costs of in-house, on-premise solutions. Existing Primavera users will find the transition to EPPM Cloud to be rapid and efficient as your existing Primavera configuration, integrations, data and reports can be migrated quickly to EPPM Cloud without project interruption. If you are new to Primavera, then Critigen's Quick Start Package is the fastest way to start working with Primavera.

MON14 – Monday 9:45 to 11:00 Osprey 2

Acumen Fuse - Case Study – Successful Dispute Resolution using Acumen Fuse

This presentation describes how the use of schedule and risk metrics proved invaluable in helping to determine the root cause of project failure and associated legal dispute regarding a major construction project. Used as part of a highly successful expert witness testimony, the results from this project metric analysis helped not only determine the root cause of schedule/cost overruns but also gave new insight into how to accelerate the project going forward. Pinpointing root cause of schedule delays as well as determining the realism and risk exposure surrounding both parties respective project schedules was key to resolution.

The presentation discusses specific schedule and risk metrics and techniques that helped resolution be achieved that ultimately provided benefit for both parties.

MON15 – Monday 9:45 to 11:00 Mockingbird 1

Hospital Construction with Virtual Construction and Location-based Scheduling

Hospital construction in California is very competitive and rigorous. Not only do hospitals need to serve their communities with the finest services possible, but they also have to compete for the best doctors, nurses, and care staff, so the facilities need to be state of the art. Hospitals are also the lifeline of the community when an emergency strikes, and now according to law, they need to be able to withstand earthquakes with mechanical systems intact.

Join Chris Pechacek from McCarthy as he details the construction philosophy and practice for a large hospital project in California. This session will focus on location-based scheduling techniques and on-site production control. Lessons learned from this complex hospital project are useful on all types of construction projects around the globe. But the key is having a 3D model integrated with the location-based schedule and managing continuous workflow using Location-based management methods.

MON16 – Monday 9:45 to 11:00 Toucan 1

Introduction to Oracle's Primavera P3 Project Planner Software
This session will lead attendees from download of Primavera P3 software from Oracle's website to delivery of the first update report to management of the Contractor and the Owner. Taught by a veteran user of Primavera P3, Ted Douglas, emphasis will be given to Primavera P3's professional features, superior calculations, and ease of use.

MON17 – Monday 9:45 to 11:00 Toucan 2

Intro to PMA Netpoint Facilitating an Electronic Interactive Full Wall

This session will lead attendees from download of Netpoint software from PMA's website to delivery of the first update report to management of the Contractor and the Owner. Taught by a member of the PMA team.

Vezina, Lawrence & Piscitelli, P.A.

Attorneys at Law

Vezina, Lawrence & Piscitelli, P.A. serves the construction industry throughout Florida and the eastern seaboard of the United States. The firm provides legal services on behalf of contractors, concessionaires and other public-private partnership parties, design firms, sureties, and owners. The construction practice encompasses all facets of litigation, environmental law, business law and transactions, and other legal specialties required to serve the industry

MON22 – Monday 11:00 to 12:15 Swan 5

Applying Earned Value on Small and Large Projects

Today, more than ever before, the pressure on project participants to deliver more with fewer resources on a tightly constrained schedule demands the use of an earned value based management process. However, there is a widespread perception in the industry that implementing an earned value based system will bring an added degree of bureaucracy and paperwork that may outweigh the benefits derived from it.

Mr. Pradip Mehta, PMP, CCE, PSP, EVP, PMI-SP, RMP, will address a few streamlined approaches to get the most out of implementing earned value on both small as well as large projects. It will also examine different elements that play an important role in determining how effective earned value will be for you in your particular application. He will also discuss few case studies to expose some of the dangers and pitfalls of the "strict" interpretation of variance data related to earned value.

MON23 – Monday 11:00 to 12:15 Osprey 1

Using the Measured Mile to Increase Calculated Delay Quantum

Traditionally, productivity analyses and delay analyses are treated separately as two different methodologies and often prepared as separate work products. In reality, however, both analyses address productivity issues. A Delay Analysis can be used, in part, as a measure of the inefficient use of time. A Productivity Analysis measures the inefficient use of resources. This presentation draws correlations between the two products. These correlations can be used to increase the calculated delay quantum by using the results of a "Measured Mile" analysis and thereby increasing the number of days for which the time driven cost damages are attributable.

Presented by Glen R. Palmer, PSP, CFCC, who is widely experienced in all dispute resolution analyses and has testified as an expert, and Jeff Ottesen, PE, PSP, CFCC, also provides expert consulting services to owners, contractors, sureties, and legal counsel in the power, process, transportation, building and heavy civil sectors.

MON24 – Monday 11:00 to 12:15 Osprey 2

RDCPM® in Oracle's Primavera Risk Analysis (aka Pertmaster)

"PRA" is promoted by Oracle as an add-on to provide robust risk analysis. But it is also a robust and fully featured product for performing primary CPM schedule and resource leveling. And it is the only product that is currently RDCPM® Compliant Certified. Come learn how the RDCPM® features of "PRA" can improve your schedule and project control.

Schedule Planning and Production Control in Vico Office

This advanced course is designed for planning teams who want to learn more about location-based management theory and how it is used in complex, commercial construction projects. 4D BIM scheduling is comprised of 4 components in Vico Office: quantities by location, flowline theory, on-site production control, and 4D movie simulations. In this session, we will focus on the planning functional subset of locations, flowline, and using scheduling simulations to explain the project to the Owner. However, as any good Scheduler knows, planning the schedule is only half the battle; the other half is managing to the schedule on-site. We will examine the skills and toolsets necessary to perform on-site production control. We will tackle measuring work put in place by location and comparing actuals to planned; using forecasts to help Supers see potential conflicts far in advance; and working as a team to solve scheduling conflicts and avoid cascading delays.

Participants in this session will enjoy a deep dive into:

- **Location Breakdown Structure:** Intrinsic to model-based scheduling is the planner's ability to define multiple location structures for trade-specific work sequences. These locations are then used to perform location-based quantity takeoff which is the input for location-based cost and schedule planning.
- **Schedule Planning:** In model-based scheduling, the planning process is a scientific derivation of the BIM model geometry for quantities, combined with locations and crew productivity rates.
- **Flowline Theory:** This scheduling approach asserts that subcontractors can work at optimum productivity rates with optimum safety and craftsmanship if their location is free of unnecessary materials and other crews and if they work continuously from location to location.
- **Scheduling Simulation:** Your Owner deliverables should be more than a simple schedule movie – it needs to be a powerful playback of the scientifically-derived Flowline schedule based on quantities by location and crew productivity rates. Use it to illustrate the schedule to the Owner, supplemented by the cost- and resource-loaded schedule.
- **On-Site Monitoring:** Using a simple Control Chart, team members update the Task per Location status on a daily or weekly basis and project stakeholders can easily identify schedule problems.
- **Forecasts:** Forecasting tools enable planners to easily analyze project schedules based on actual progress.
- **What-If Scenarios:** Run what-if scenarios to determine outcomes should work continue as-is.
- **Collaborative Planning:** Design solutions to alleviate the problem (more manpower, different locations, commitments from other Subs).
- **Communication:** Design 4D simulations specifically for each trade to better communicate what needs to be achieved on-site.

Model-based scheduling introduces a host of new skills and deliverables for the planning team. Learn what it takes to use BIM models to power your scheduling workflow and to offer the Owner a completely different experience with cost-and resource-loaded schedules that are updated during the construction phase of a project. Cost-loaded schedules allow project teams to determine planned cost at a point in time and compare that to the actual cost from reported completion. Creating and maintaining these deliverables, as well as creating the progress reports, is only possible with a solution tightly integrated around the 3D model, the 4D schedule, and the 5D estimate.

MON26 – Monday 11:00 to 12:15 Toucan 1

Managing LightRail Projects with a Lightweight Team

The Exposition Light Rail Construction Authority is building a light rail line from Union Station in Los Angeles to Santa Monica. In order to help manage the large volumes of paperwork with a small team, they are taking advantage of Oracle Primavera P6 and Contract Management. The systems use LDAP authentication and Sharepoint as the content repository. A custom document upload portal allows external contractors to create new items such as RFIs and Proposals in Contract Management and to link those documents into Sharepoint, where they are tagged with searchable metadata. Custom Workflows in Sharepoint then allow simple routing and approval of the documents. Presented by Daniel Williams.

MON27 – Monday 11:00 to 12:15 Toucan 2

Bridging from Oracle's Primavera P3 to Primavera P6

Past Present Future Status of RP-29

The newest revision to AACE's Recommended Practice on Forensic Schedule Analyses – RP29R-03 was published in May of 2011. This 2011 revision is the culmination of nearly eight years of work by dozens, if not hundreds of individuals. Through its' revisions it has emerged as a stronger document with more general support that might have been believed when first published in 2007. Certain battles that have been well publicized seem to have been largely resolved and the document has incorporated the best of all the contributors and commentators ideas.

Editors and contributors, Kenji Hoshino (khoshino@pcfconsultants.com) and John Livengood (John.Livengood@arcadis-us.com) will provide an overview of the RP's history, a detailed discussion of the current edition, and a technical explanation of nine different schedule delay methodologies detailed in the RP. They will also provide a glimpse of what the AACE has in store for the RP and the forthcoming work in support of the RP being done by the PMI Scheduling Community of Practice and other organizations. The RP is available for free from the AACE at <http://www.aacei.org/resources/rp/>.

MON33 – Monday 2:00 to 3:15 Osprey 1

Real-Life Application of Oracle Primavera Contract Management's Daily Report Module

The best backup documentation to any schedule, especially if it ever goes to claim, is a daily record of what happened on the project, preferably tied to the schedule. Primavera's Contract Management software provides a web based environment with a great deal of functionality and the ability to tie Daily Reports to the schedule. However, Daily Reports (or Inspection Reports) are often very specific to how different organizations do business and the standard Contract Management Interface gets you only part way there. While CM supports an unlimited number of custom fields, it does not give you the flexibility to arrange or present these fields in a user-friendly manner.

This presentation will show how DRMcNatty & Associates has assisted several owner clients in deploying organization specific interfaces, through web browsers, that provide practical solutions to what can be a complicated issue - Inspection Daily Reports. One implementation was credited by the client with reducing their annual costs for inspection reporting by \$175,000.

Presented by Don McNatty , Vice President, D. R. McNatty & Associates, Inc.

Intro to Construction Market Surveying

Construction Market Surveys which include market pricing studies, economic/escalation studies, union and PLA surveys, and local/small business capability surveys are utilized by large Owners, including the Federal and State Agencies in preparation for large-scale construction projects. These studies aid owners in identifying risks, setting project budgets and schedules, and evaluating procurement options. This workshop will introduce the topic in addition to covering successful and unsuccessful surveying techniques and report writing techniques.

Presented by Basil P. Alexander, P.E., Esq., CCE, LEED AP
of O'Connor Construction Management, Inc.

MON35 – Monday 2:00 to 3:15 Mockingbird 1

Integrated Planning and Scheduling for Advanced Technology Projects

This session focuses on developing, implementing and operating integrated schedules for advanced technology projects in the semiconductor, biotech and pharmaceutical industries. Processes, methods and examples are drawn from real world projects. As well, lessons learned – both the dos and don'ts – gathered from these projects will be discussed. This session examines the full life cycle of an integrated schedule. It includes discovery at the very beginning, designing the schedule, access for different users, pilot testing the solution, introducing the schedule into operation, operating the schedule, reporting to the various audiences, and closing out at the end of the project.

This session will be presented by Barry Meyers, Managing Director Enterprise Solutions, and Stephanie Thatcher, President, at ORCAS Project Controls (www.orcasnetwork.com).

Scheduling Best Practices: Beyond the 14 Point Assessment

DCMA's 14 Point Assessment has received a lot of attention over the past few years, to the point that it is now recognized as the leading diagnostic test for integrated master schedules (IMS) within several government agencies. However, the assessment is by nature a "lagging indicator" in terms of a schedule's development and subsequent implementation in support of a project or program. Both the government and its contracting community are starting to understand this nuance, and are placing much more emphasis on up front utilization of industry-recognized standards and practices as the best way to develop a sound project or program schedule. This presentation will focus on the efforts of four entities in relation to scheduling standards/practices, two being specific to government contracting while the other two are professional associations that strive to be recognized across all industries. The goal of the resulting discussion will not be to decide which of the four has produced the "best" set of recommendations, but rather to provide attendees with a broad body of knowledge that can and should be used to develop better schedules in the future.

Presented by Michael R. Nosbisch, CCC, PSP, President of AACE International, and Managing Principal, Western Region, Project Time & Cost, Inc.

MON37 – Monday 2:00 to 3:15 Toucan 2

Updating and Understanding Project Status in Phoenix Project Manager

Phoenix Project Manager 3 is a project-focused CPM scheduling tool for the construction, energy and architecture/engineering markets.

In this session, Jay Poulsen, President of Phoenix Project Management, will explain the process of updating a project's status in Phoenix Project Manager, and how Phoenix provides tools to make the update process easier.

Mr. Poulsen will also discuss how Phoenix's unique Status-on-Master/Status-on-Current progress displays help contractors and owners better understand where a project is ahead or behind schedule, and what that means for the project.

Rushed Projects Mistakes Owners Make That Cause Claims

A panel discussion, double session from 3:35 until 6:00, led by Jim Zack and Toshi Dezaki of Navigant.

Too many owners feel compelled to rush their projects to construction. Time to market, inflation costs, expiring patent rights, funding deadlines, purchase agreement requirements and Court orders are but few of the reasons given for getting projects underway quickly. This session focuses on mistakes owner's make when they rush their projects to construction. These mistakes give rise to claims, disputes and sometimes, failure. This panel consists of an experienced senior public works owner; an in-house counsel for a contractor; a seasoned construction litigator; and a well experienced construction consultant. Each will present their own lists of most common mistakes made when rushing projects out the door for bidding, based on their experience and perspective.

From these lists, the panel will select the "Top Ten Mistakes Owners Make" offering them as a take away for the audience

MAKE AN IMPACT

Navigating the right course in complex construction projects can be a **balancing act**. Owners, contractors, A/E firms, sureties and their counsel look to Navigant's construction claims and advisory experts to provide **clarity** and **focus** to high risk project issues. **Drive** results. Make an **Impact**.

Project Planning – Then Scheduling

Effective project planning begins and ends with the efforts of the project team. How well the project team has developed the project plan can contribute to the success or failure of the project. The project schedule is one of many project management tools used to measure progress against the overall project plan. There are any numbers of reasons that projects do not complete as scheduled. Too often the blame is placed on the project schedule. The reality is that the project was probably not properly planned and subsequently that flawed plan was “interpreted” into a schedule to fit the project’s required completion date.

This session will focus on the necessary elements of project planning and the actions required by the project team in order to translate that plan into a meaningful project schedule which will serve as a navigation tool to guide the project team toward successful and “on time” project completion.

How to Deal with a Contractor's Schedule that Cannot be Approved

The contractor's schedule cannot be approved, Where do we go from here?
Presented by Chris Carson of Alpha Corporation

It is in the best interests of any project to get an approved as-planned schedule in place as soon as possible to ensure that appropriate planning is done, to allow management of the project for both the Contractor and the Owner, to provide a basis for analysis of trending, completion predictions, and delay, and to develop validated documentation in support of future resolution of disputes. This is also true of schedule updates; approved updates contribute to project success through fewer disagreements as to the intent of the schedule in addition to providing the basis for analysis. Clearly the as-planned portion of the schedules must model the Contractor's means and methods of construction, the as-built portion must accurately represent the history, and the schedule must meet contractual requirements as well as represent a reasonable approach to scheduling all work outside the Contractor's responsibility.

If a schedule does not support these goals, it likely does not meet industry best practices closely enough to be approved without the Owner taking on risks embedded in or resulting from the approved schedule. In addition, schedule approval is a process that is designed to improve the quality of schedules and protect the owner and contractor. Many and likely most owner representatives provide identification of deficiencies as well as recommendations for improvement of scheduling best practices.

Unfortunately, too many projects start without approved schedules, and sometimes the schedules are never approved. This raises risks to both the Contractor and the Owner. However, if the risks of approving the schedule are higher than the risks and benefits to the project of approving that schedule, the schedule should be rejected. In the case of rejection, knowing what to do and how to deal with a project that does not have an approved schedule in place can be very important to the success of the project and protection of the two party's interests.

The Great Divorce: Cost Loaded Schedule Updating

Cost and resource loaded CPM network schedules provide detailed planning information to the owner's project management team; many owners require them for projects above a certain size. But network schedules are designed to measure and manage time, not dollars. During the course of construction, resource or cost drivers can make CPM schedule calculations invalid. Unpaid remnants of activities in progress (paid to 97% and holding) can distort the schedule by increasing "out-of-sequence" reporting. Schedule updates must provide valid projections of completion in order to support the management team.

This presentation will evaluate the problems inherent in using cost-loaded schedule updates as the basis for progress payments. The author recommends steps toward a "divorce" of the cost tracking from the schedule tracking during the course of construction.

Presented by John Orr, PSP of URS Corporation.

Practical Use of Earned Value for Real-time Forecast and Control

Britt Creer, PMP, ARES Software Project Management Consultant has over 15 years in implementing Earned Value Management and Project Controls best practices and procedures for the Oil & Gas, Commercial Construction, Aerospace, Department of Energy, and Nuclear industries for waste and new build – helping customers deliver solutions for improved Cost and Project Management. Most recently, Britt focused on establishing Project Management Office methodologies in the Nuclear Waste industry along with assisting the Chinese Nuclear New Build industry.

This presentation will discuss the fundamentals of earned value (EV) management, best practices applied and the return on investment achieved when applying EV as a management tool. In this session, you will leave with practical application of EV and learn how to apply subjective methods for progressing work, measure earned value, analyze data, and forecast project completion costs.

OPSIG Oracle Primavera Special Interest Group Network Event

The Oracle Primavera Special Interest Group (OPSIG), under the guidance and support from Oracle Applications User Group (OAUG) and Quest International Users Group (Quest) and Oracle Primavera Global Business Unit, will hold an information and networking session for Primavera Users. Our featured speaker will be Dick Faris, Primavera Co-Founder & Oracle Senior Vice President.

The session will focus on the OPSIG objective, as a user run organization, providing the Oracle Primavera user communities to:

1. Share best practices and techniques within and across different user environments and communities.
2. Provide a forum for discussion and education on Oracle Primavera products, applications, and related issue.
3. Provide a forum to identify, document, and recommend enhancements to Oracle Primavera as a collective group of users.
4. Provide user sessions and meetings at the annual Oracle Users Conference, COLLABORATE, and at the annual Oracle OpenWorld conference.

Attendees will gain an insight of the OPSIG's organization and its relationship with OAUG, Quest, and Oracle Primavera. In addition, you will have an opportunity to share your desires for the OPSIG.

TPG PMCS Enterprise 2010

TPG Project Management Control System (TPG PMCS) is designed to be the industry's leading solution for project and financial controls for capital project and program management within diverse industries. The solution was conceived in 2009 by TPG and Jacobs Engineering Group to fulfill the requirements for managing the financials, schedules, and project controls for one of the world's largest capital programs by creating an Enterprise-wide single point of entry which is capable of integrating core internal systems such as SAP, Oracle, Primavera, and replacing many of the needed islands of tools. The focus of the solution is to create an Enterprise-Wide collaboration environment which provides control and visibility of program and project operations, decreases costs by eliminating administrative burdens due to excessive data entry and analysis of multiple systems, efficiently and effectively forces the business to operate as a single unit based on best practice process methodologies, and leverages internal systems to their maximum capabilities.

Was the Project Really Late?

(An Introduction to Schedule Risk Analysis.)

We've all seen the statistics about how many projects are completed late, and project managers' hand-wringing about why this should be. But maybe they are asking the wrong question. Maybe the right question to ask is where their expectations about when projects should be completed come from.

If a weather forecaster predicts rain and it doesn't rain, we don't say the weather is wrong. Rather we place the blame squarely on the forecaster. So why, when we fail to finish a project on the predicted date, do we blame the project for being "late"? Was the project late, or was the prediction unrealistic?

I suggest that the single most important reason why projects do not finish when expected is because our expectations are hopelessly optimistic. And a major reason for this is that project plans based on deterministic CPM do not take account of uncertainty. (The only thing we know for sure about a deterministic projection is that it will be wrong.)

The project completion date resulting from deterministic CPM is wrong not only in its failure to capture the uncertainty in this date, but also in being systematically biased towards optimism. So it is no wonder that our projects are "late."

The paper will conclude with an explanation of how schedule risk analysis works, with special reference to Barbecana's Full Monte, and how it results in more realistic expectations.

“Prediction is very difficult, especially if it's about the future.” – Nils Bohr

Please visit us at Booth #16 to see a demo of Full Monte

All project managers know that the future is uncertain and that our deterministic plans are bound to be wrong. **Full Monte™** helps you analyze the impact of this uncertainty to create more realistic project plans.

Using Monte Carlo simulation, **Full Monte™** can consider thousands of possible outcomes for your project in seconds, summarizing them as probability distributions of project finish date and cost.

Full Monte™ works on Microsoft® Project schedules from within Microsoft® Project 2007 or 2010.

BARBECANA

The new name in schedule risk analysis

Visit barbecana.com today for a Full Monte™ free trial.

BIM and CPM

World Class Planning Requires World Class Communication

Project Planners do more than plan...they collaborate, integrate, and communicate. As such, they must stay abreast of powerful technologies. They can benefit from whole-team use of a Building Information Modeling solution.

The 3D, 4D, and 5D capabilities of BIM create an opportunity for project planners to craft better project plans, engage more of the project stakeholders for their inputs, evaluate the impact of potential changes in scope, improve safety and logistics, and produce powerful rich output for the other stakeholders. Owners are increasingly demanding the use of BIM and the integrated model as deliverable, so consider advancing your career and being a leader in this new potent skill that is part science and art, and constantly improving...and more and more affordable. The highest and best use of BIM is used in a Lean Workflow. (Lean Construction Institute Maxim: "Efforts to manage and improve performance are aimed at improving total project performance because it is more important than reducing the cost or increasing the speed of any activity.") You are on the threshold of helping your teams achieve an unprecedented level of performance.

Presented by Ken Stowe, P.E. Autodesk Construction Business Development – North America

Autodesk®

TUE15 Tuesday 9:45 to 11:00 Mockingbird 1

The CPM Schedule is not always an accurate reflection of the Construction Plan

As CPM schedules become overpopulated with data from multiple sources, the focus shifts to creating management controls for every aspect of the project within one source, the CPM Schedule. Although cost and resource data is useful in the right dosage, when does it become too much data? Change event fragments, material and labor cost data, labor hours, equipment and material resources can all weigh down the usefulness of a good scheduling plan for the projects construction. The schedule then diverges from being an effective management tool for construction activity and when this occurs, can have little or no correlation to what is actually taking place on the project. This presentation will review a few project case studies to focus on some of the key causes of schedule divergence from the construction plan and provide some insight as to how the management team can avoid such pitfalls and keep the schedule on track.

Presented by Andy Roeser, P.E., PSP, of Capital Project Management, Inc.

Conversion and Comparison of Microsoft Project to and from Oracle Primavera P6

In the modern age of computer aided CPM scheduling, the user has many different programs to choose from in which to schedule a project. P6 has defined itself as the program of choice for more frequent sophisticated users and complex projects. Microsoft Project has been the simpler, cost effective, user friendly alternative.

By taking a past project created in Primavera 6 (P6) and recreating it in Microsoft Project (MSP) a variety of tools can be compared and contrasted between the two programs: user interface, logic, calendars, resources, cost, activities ID's, exporting/importing, updating, reporting, and overall program use.

Based on this case study of the two programs and the criteria above a comparison will be created between them that will help bridge the gap for greater industry understanding and functionality of the programs.

Presented by Aaron Harper of Scheduling Consultants, Ltd.

TUE17 Tuesday 9:45 to 11:00 Toucan 2

Bringing the Power of Cloud-Based Collaboration to Project Scheduling

Cloud-based construction project management applications are the latest innovation in construction project management, but how can web applications work with established scheduling tools like Microsoft Project and Primavera P6? Do project managers and schedulers have to give up using their familiar scheduling software, all in the name of progress?

Procure's cloud-based construction project management software integrates with industry-standard scheduling tools such as MS Project in order to bring collaboration to construction scheduling. In addition, Procure can integrate with client-server applications such as construction accounting software packages to provide a hybrid cloud-and-client server suite of tools for construction project management.

Virtual Construction Models with Bentley Systems ConstructSim

The use of rich information models beyond design into the construction phase of an infrastructure project - particularly when combined with agile construction techniques in WorkFace Planning - has the potential to provide substantial benefits in the areas of reduced waste, risk mitigation and improved safety. While the increase in the adoption of BIM has also raised the industry awareness around concepts of 4D (3D + Time) and even 5D (Cost), there still remains a significant difference between the marketing hype and reality of such technology deployment at the job site.

There are a number of significant challenges in the use of BIM data to be effectively leveraged into the construction phase of a project. One major issue is simply that the level of granularity in rich information models generally does not match the level of granularity in a typical CPM schedule for construction. Meanwhile, construction projects of even moderate complexity are subject to numerous constraints that can limit the commencement or progression of field operations, many of which are at a level-of-detail well below that represented in the CPM schedule.

This presentation will discuss how Bentley's ConstructSim platform has been leveraged as a dynamic planning environment on construction projects, allowing crew-level work packages to be defined, resourced and sequenced in a virtual environment, and systematically rolled-up to properly integrate with project CPM schedules. Moreover, the resulting Virtual Construction Model (VCM) can be further leveraged to assist with constraint identification and expediting assignments as a key element in the look-ahead planning process, which helps ensure safe and productive field operations, and keep a project on the critical path. Additional insights will be provided into the common challenges and practical limitations experienced by users who are leveraging BIM data from engineering into construction.

Presented by Dr. Ted Blackmon, Vice President of Construction Solutions with Bentley Systems.

Submitting Contractor Schedules in a Hosted P6 Professional DOT Environment

Contractors are regularly required to create and submit CPM Schedules to owners to track the planning, scheduling, execution, control, and forecasting of a construction project. The NYSDOT standardized on OraclePrimavera P6 Professional Software and provide the contractors with the design guidance and P6 Professional Software to prepare and maintain the CPM Schedule in the NYSDOT hosted P6 Professional environment. The contractor is required to create and electronically submit the Baseline Schedule, Monthly Update Progress Schedules with Schedule Narrative, and the Final As-Built Progress Schedule at the completion of the project in accordance with the NYSDOT CPM Specifications for using only OraclePrimavera P6 Professional Software.

Jonathan McNatty, a Senior Consultant and Certified Primavera Trainer for D. R. McNatty & Associates, Inc. discusses how this hosted approach deployed by NYSDOT for P6 Professional can avoid many common pitfalls encountered in managing schedule submissions such as importing & exporting from different scheduling tools, managing multiple schedules in multiple locations, inconsistent reporting, downloading software & installing software, and technical issues with no support.

Jonathan will demonstrate the process he uses to status contract client schedules in a real world hosted DOT implementation showcasing best practices that help simplify the process.

Marrying the Financial World with the Project World

Come see how to increase efficiency and decrease data errors between your Financial ERP And Project Systems. TPG PSLink enables you to combine the advantages of the most popular project management software with those of the leading ERP system. Everyone works with whichever tool is best for them. Your day-to-day work efficiency increases, as our many TPG PSLink reference customers can confirm.

TPG PSLink enables the bidirectional data exchange between Microsoft Project and SAP. With its extensive checking mechanisms, TPG PSLink ensures the complete consistency of all of the shared data in the participating systems. A difference analysis shows you the changes in the data before they are written to the other system – and only these changes are transferred. This is what makes TPG PSLink so unique compared to other solutions.

Presented by Ken Buchanan of TPG America

TUE27 Tuesday 11:00 to 12:15 Toucan 2

Differentiating Between Activities and Work = Resource Optimization

The current focus of CPM scheduling on activities, sequences, float and criticality is failing to deliver successful project outcomes. This presentation will look at the alternative approach based on workflows and the optimisation of available resources; the underlying approach in methodologies such as Flow-Line, ToC and Critical Chain.

Adopting a dynamic resource optimisation approach would involve changing the underlying philosophical approach embedded in CPM from a belief that the pre-determined duration and sequencing of activities takes precedence, constrained by the availability of resources; to one that recognises the real objective of scheduling is to keep the resources working effectively (resource work flows) and that any duration can be varied at a cost, and any activity sequencing represents a constraint on the locations where resources can work. The first part of the presentation will outline the concept followed by a discussion period.

Presented by Patrick Weaver of Mosaic Project Services Pty Ltd

Mock Trial Luncheon Theatre

Judge Marshall's court is again in session for this year's Mock Trial presentation. So pick up your box lunch, be seated, and enjoy the show! Judge Marshall will teach the LAW. Two attorneys, renowned for international and domestic construction litigation, will be providing examples of trial techniques, setting traps for unwary experts. And two experts will be providing examples of bad and good behavior, as well as providing the facts of the case to Judge Marshall and the jury (you!).

Oracle's Primavera P6 System Administrator Tips & Tricks

This session is devoted to System Administrators responsible for maintaining an Oracle's Primavera P6 implementation for tens to thousands of users

TUE33 Tuesday 12:45 to 1:20 Osprey 1

Showcase of Document Management Technology

This session will explore how the use of document management technologies can assist in creating sustainable building practices; enabling construction projects to finish on time or ahead of schedule and under budget. Hear from a construction industry leader as she explores ways in which Electronic Document Management can help cut costs, advance schedules, create transparency across all project stakeholders, promote sustainable building practices, and help project owners regain control of the entire project from pre-construction through closeout.

Highlights will include practices used to: enable collaboration amongst project stakeholders, compress project schedules, and reduce paper consumption & shipping costs, all while creating accountability and transparency by way of a living closeout archive which is crucial for long-term facility maintenance.

Presented by Shelley Armato of MySmartPlans

TUE34 Tuesday 12:45 to 1:20 Osprey 2

Choosing the Right Tool for the Job

A discussion on using multiple project controls packages at multiple levels of schedule reporting rather than trying to build one master database schedule.

Presented by Heath Suddleson, PSP, of Bechtel.

Innovations in EVM Systems

Best Practices for Integrating Cost and Schedule

EcoSys discusses best practices in bringing together cost and schedule to create integrated program management processes and flexible EVM reporting. Using recent case studies from both the public and private sectors, we will explore how successful EVMS/cost controls systems take into account the unique challenges of managing large, complex programs through process standardization and automation, including:

- Managing costs throughout the entire project lifecycle from funding to budgeting to bids/proposals through delivery.
- The ability to proactively make program adjustments and take corrective action based on accurate and predictive cost performance data.
- Adaptable earned value rules meeting different needs while adhering to ANSI 748 audit requirements.

Presented by Christen Bergerud, Co-Founder and Executive Vice President at EcoSys, and one of the original designers and developers of the Primavera enterprise project management suite.

TUE36 Tuesday 12:45 to 1:20 Toucan 1

Forecast Scheduling with Microsoft Project 2010

In this presentation, renowned guest speaker and master scheduler Eric Uyttewaal will focus on the subject of his new book "Forecast Scheduling with Microsoft Project 2010". He will show you how to forecast your project with just the schedule, without the need for advanced techniques like Earned Value. Building on his principle of Dynamic Scheduling, he will demonstrate how to minimize the effort spent on project scheduling. His presentation takes scheduling to the next level by showing you how to create a model of the project to forecast it dynamically. The highlights of this approach are:

- Capture your promised dates - without killing the schedule
- Minimize your effort on creating and maintaining the schedule
- Find the real Critical Path
- Update the schedule to forecast

Eric will carefully explain these principles of Forecast Scheduling, demonstrate how it would work in practice and highlight some scheduling best practices to implement it.

Project Pro

Your Specialist in IMS-Scheduling with Microsoft Project

Our solution can handle IMS-schedules of up to 50,000 tasks and
2,000 cross-project dependencies in Microsoft Project
AND STILL

allows you to perform Critical Path identification and optimization!

Prevent accumulating slippages in your program and check out this
solution at our booth (next to Microsoft's). I look forward to seeing you!

Your project is not an island:

Introduction to project management integration

You're making full use of the project management software to help manage your schedule and your subcontractors – you're in the electronic age! But when it comes to passing key information between project management and finance, it's back to the paper shuffle. This session will discuss what options are available to pass data between software systems. We'll take a high level approach and discuss what data to share, and how to share it while still maintaining autonomy and security.

Presented by Justin R. Cohen, Practice Manager, Integration Services, Partners Consulting.

Showcase of Procore at GE

This session will present a customer case-study on how Procore provides Fortune 10 client GE with a web-based project management solution. GE's implementation of Procore integrates with both Microsoft Project scheduling software and JD Edwards accounting software. The session will show how today's CPM software choice is not between a web-based or client-server solution -- instead, the best-in-class solution blends web-based collaboration, cloud storage, and client-server security.

Presented by Jeff Kemper (805) 456-7190

TUE44 Tuesday 1:40 to 2:30 Osprey 2

4D Planning and Analysis with Autodesk Navisworks

Join us for an overview of Autodesk Navisworks, it's position within the Building Information Modelling (BIM) process, and how the intelligent models created as part of the BIM process can be utilized to better plan, analyse and communicate the construction process.

TUE45 Tuesday 1:40 to 2:30 Mockingbird 1

Introduction to EcoSys EPC

This presentation will provide an overview of the EcoSys next generation planning and controls software. For both the public and private sectors, the software delivers best practices for full lifecycle project cost management in an integrated, easy to use web application. Project-driven organizations use EcoSys for capital planning, budgeting and forecasting, and comprehensive management of funds, costs, resources and earned value.

EcoSys leverages existing investments by providing seamless integration with ERPs and GLs (Oracle, SAP, Peoplesoft, JD Edwards, and many more) and project planning software (Oracle Primavera, MS Project). The most configurable solution on the market, EcoSys adapts to existing work processes, easing user adoption and immediately boosting efficiency, accuracy and visibility.

Feature rich, EcoSys provides extensive performance reporting through standard and customizable reports, dashboards, historical snapshots, variance and trend reporting, scenario analysis and EVM.

Key Differences of Asta Powerproject

Led by Andrew Willard, Asta's International Business Director, this session will show why over 45,000 users worldwide have made Asta Development's suite of project and portfolio management software a leader in the industry. The session will concentrate on features that have been developed specifically for the construction industry. Coast Software is a US Representative for Asta Development offering regional support and training. Download a trial version of Asta's powerful yet easy-to-use applications at www.astadev.com.

TUE47 Tuesday 1:40 to 2:30 Toucan 2

Using P6 as a Standalone EVMS

There are many good EVMS (Earned Value Management Systems) on the market, but they can cost a lot of money for the software and training. You can use the tool that you already know (P6) to perform EV. This session will teach you the required data elements of EV, the calculation concepts of EV and the options for these calculations. Then you will learn how to develop a baseline schedule suitable for EV and update that schedule to measure project performance. Finally, you will learn how to produce tabular and graphical reports of your project's performance.

Presented by Glenn Betts of Parsons Corporation and Sean Cain of MC Dean.

TUE53 Tuesday 2:45 to 4:00 Osprey 1

Managing Oracle Primavera Contract Management

An administrator's work is never done. In supporting the Oracle's Primavera Contract Management, an administrator is asked to tackle a large number of disparate issues on a daily basis. And while most issues have a known solution in the Oracle support site, finding the solution can be a challenge in itself. In this session we review the overall architecture of Contract Management (both in JBoss and Weblogic) from an administrator's point of view and discuss some common issues, showing how each can be identified, replicated, and solved.

Presented by Daniel Williams.

TUE54 Tuesday 2:45 to 4:00 Osprey 2

Virtual Construction Modeling BIM for Delivery

Why Does 4D Work? A story about a journey led by incredibly down-to-earth but powerful software which continues to attract new followers everyday into a growing community of professional constructors. As Synchro Ltd concludes our 10th year anniversary from our humble beginnings in February 2001, we invite you to take a little time to discover our story, how we work to understand the market and the companies that we serve. Observe with us where our innovation started and where we believe the industry is heading.

Presented by Tom Dengenis, CEO Synchro Ltd

TUE55 Tuesday 2:45 to 4:00 Mockingbird 1

Construction CPM Conference Exam

A one hour exam conducted by the "faculty" of the Construction CPM Conference to show basic skills in CPM Planning & Scheduling as required for use in the CONSTRUCTION industry
